Job Description

Company: Orbitline Systems Pvt. Ltd. **Position:** Software Engineer — Backend (Java)
Experience: 1.5 – 3 Years **Location:** Pune, Maharashtra (Hybrid — 3 days WFO) **Notice Period:** Immediate to 30 days preferred

Job Purpose

We are looking for a Backend Software Engineer with hands-on Java/Spring Boot experience to strengthen our microservices team building order-management systems for e-commerce clients.

Responsibilities

- Design, develop and maintain RESTful microservices using Spring Boot
- Write efficient SQL queries and optimize database interactions (PostgreSQL)
- Participate in code reviews and enforce coding best practices within the team
- Own end-to-end delivery of assigned modules, from design to production deployment
- Collaborate with QA to resolve defects within committed SLAs
- Integrate third-party APIs and internal services (payment gateways, notification services)
- Contribute to CI/CD pipeline improvements (Jenkins/GitLab CI)
- Mentor 1-2 fresher/junior developers on the team

Must-Have Skills

- 1.5+ years hands-on experience with Core Java and Spring Boot
- Strong understanding of REST API design and microservices architecture
- Proficiency in SQL and experience with PostgreSQL or MySQL
- Experience with Git-based version control and branching strategies
- Basic understanding of Docker and containerized deployments
- Exposure to Agile/Scrum development methodology

Good to Have

- Experience with Kafka or RabbitMQ for async messaging
- Exposure to AWS (EC2, S3, RDS)
- Familiarity with unit testing frameworks (JUnit, Mockito)

Educational Qualification

- BE/BTech/MCA in Computer Science or related field

Interview Process

1. Technical Screening Call (HR)
2. Online Coding Round (DSA + SQL)

3. Technical Interview with Engineering Manager
4. HR & Offer Discussion

Compensation

INR 7 - 10 LPA (based on experience and interview performance)
