PROFESSIONAL SUMMARY

Full Stack Developer (fresher) with hands-on experience developing and unit testing web applications using Java, Spring Boot, and React.js within agile/scrum development cycles. Skilled in designing RESTful APIs, understanding front-end/back-end communication, and developing responsive user interfaces. Strong foundation in object-oriented programming, data structures and algorithms, and system design principles, with practical experience in Git version control, peer code reviews, and resolving integration bugs. Excellent written and verbal communicator seeking an Intern role to apply technical expertise and continue growing as a developer.

TECHNICAL SKILLS

Web Technologies: HTML5, CSS3, React.js, REST API, MVC Architecture

Programming Languages: Java, C++, C

Backend Framework: Spring Boot

Core CS Concepts: Data Structures, OOP, SDLC, System Design (Basic)

Database: MySQL (Schema Design, Querying, Joins, Indexing)

Tools and IDEs: Git/GitHub, VS Code, Postman, MySQL Workbench

Operating Systems: Windows, Linux (Ubuntu)

EDUCATION

M.Sc. in Scientific Computing | Savitribai Phule Pune University | Aug 2025 - May 2026

B.Sc. in Computer Science | Savitribai Phule Pune University | 2021 - 2024 | CGPA: 7.69

HSC (12th Grade) - General Science | Maharashtra State Board | 2021 | 85.83%

SSC (10th Grade) | Maharashtra State Board | 2019 | 87.80%

PROJECTS

Online Queue Management System

Duration: Aug 2025 - May 2026 | Team Size: 3 Members | Role: Full Stack Developer | Tech Stack: React.js, Spring Boot, MySQL, REST API

A full stack web application designed to digitize and streamline queue management for high-footfall services such as hospitals, banks, government offices, and hotels. The system eliminates physical queuing by issuing virtual tokens to users and providing live queue status updates. Features a React.js frontend for intuitive user experience and a Spring Boot backend exposing RESTful APIs. MySQL persists token records, service counters, and queue state.

- Designed and developed 8+ RESTful APIs in Spring Boot following MVC architecture for token generation, counter management, and real-time queue status updates, translating requirements and user stories into functional, well-structured code
- Followed SDLC practices including sprint planning, feature scoping, and peer code reviews across a 10-month agile development cycle, collaborating with cross-functional teams in a scrum environment
- Integrated frontend with backend APIs and performed end-to-end API testing using Postman, catching and resolving 10+ integration bugs before deployment
- Built a responsive React.js frontend with a live token dashboard, reducing average user wait-time visibility lag to under 2 seconds
- Designed a normalized MySQL database schema across 5+ tables covering token lifecycle, service counters, and user sessions, ensuring data consistency under concurrent access

Numerical Computing Library

Duration: Jan 2026 - Nov 2026 | Team Size: Individual Project | Role: Solo Developer | Tech Stack: C++, OOP, STL

A C++ library for handling common linear algebra and numerical computing tasks. Built as part of M.Sc. coursework, the library covers matrix operations, solving systems of equations, and related algorithms. Code is structured using OOP principles so each component is self-contained and easy to extend.

- Architected the full library using object-oriented programming principles in C++, organizing 10+ reusable classes across linear algebra and matrix operation modules

- Implemented Gaussian Elimination and LU Decomposition algorithms, achieving correct solutions for systems of up to 10 equations verified against known results
- Developed 6+ matrix operation utilities (multiplication, transposition, determinant, inverse) as standalone, unit-tested components, improving code maintainability
- Achieved 90%+ test pass rate across all modules through systematic unit testing against mathematical reference outputs
- Documented the full API with usage examples, reducing onboarding time for future academic users

SOFT SKILLS

Teamwork, Problem Solving, Communication, Creativity, Agile Development
