Professional Summary

Full Stack Developer with hands-on experience building scalable web applications using Java, Spring Boot, and React.js. Proficient in developing REST APIs, designing normalized databases, and creating responsive user interfaces. Seeking opportunities to contribute to innovative software projects and grow technical expertise.

Technical Skills

Programming Languages: Java, C++, C
Frontend Technologies: React.js
Backend Technologies: Spring Boot, REST API, MVC Architecture
Database: MySQL (Schema Design, Joins, Query Optimization)
Tools & Platforms: Git, GitHub, IntelliJ IDEA, VS Code, Postman, MySQL Workbench
Operating Systems: Windows, Linux (Ubuntu)

Projects

Online Queue Management System **[GitHub]**
React.js, Spring Boot, MySQL, REST API *Aug 2024 – May 2025*
Team Size: 3

A web application that helps organizations like hospitals, banks, and hotels manage customer queues digitally. Customers get virtual tokens instead of waiting in physical lines, and can track their queue status in real-time.

Key Responsibilities:
- Designed the complete system architecture using Use Case and ER Diagrams to plan features and database structure
- Created UI/UX mockups in Figma before starting development to visualize the final product
- Developed responsive web pages for user and admin workflows using React.js
- Built 15+ REST APIs in Spring Boot for user and admin operations including token creation, queue updates, and service management
- Designed MySQL database with proper relationships to store queue data, tokens, and service information
- Connected frontend and backend, tested all features using Postman to ensure everything works correctly
- Deployed the live project with frontend on Vercel, backend on Render, and database hosted on Aiven

Numerical Computing Library **[GitHub]**
C++, OOP, STL *Jan 2025 – Nov 2025*
Individual Project

An open-source C++ library that provides tools for working with matrices and solving mathematical equations. It helps developers perform complex matrix calculations without writing algorithms from scratch.

Key Responsibilities:
- Implemented mathematical algorithms like Gaussian Elimination and LU Decomposition to solve linear equations
- Built reusable matrix classes that can perform operations like finding determinants, inverses, and multiplying matrices
- Applied core OOP principles: Inheritance for creating specialized matrix types, Encapsulation to protect data, Polymorphism for flexible function behavior, Abstraction through pure virtual functions, ensuring clean and maintainable code structure
- Optimized the code to efficiently handle large matrices (up to 225 × 225) without running out of memory
- Created detailed documentation with examples showing how to use the library in real projects
- Published the library as open-source on GitHub for other developers to use and contribute

Education

M.Sc. Scientific Computing **Pursuing**
Savitribai Phule Pune University

B.Sc. Computer Science **2022 – 2025**
Savitribai Phule Pune University | CGPA: 6.23

Higher Secondary Certificate (HSC) **2022**
Maharashtra State Board | Score: 54.67%

Secondary School Certificate (SSC) **2020**
Maharashtra State Board | Score: 89.40%
