Pune, Maharashtra, India

PROFESSIONAL SUMMARY

Motivated Computer Science graduate currently pursuing an MSc in Scientific Computing, with hands-on experience in Python, JavaScript, C, and C++. Passionate about building practical software solutions across health technology, numerical computing, and interactive applications. Comfortable working across the full stack and with design tools such as Figma. Eager to apply strong problem-solving skills and a growth mindset in a collaborative technical environment.

EDUCATION

MSc Scientific Computing | Savitribai Phule Pune University, Pune, Maharashtra
2025 – Present

BSc Computer Science (Honours) | Kohima Science College, Jotsoma, Nagaland
2021 – 2024

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, C, C++ (learning), HTML, CSS

Frameworks & Libraries: React, Tailwind CSS

Design & Tools: Figma, Git, GitHub, VS Code

Core Concepts: Numerical Computing, Linear Algebra, OOP, Scientific Computing, Data Structures, Algorithms, RESTful APIs, Client-Server Architecture

PROJECTS

NC Library – Numerical Computing Library | *C++* | *January 2026 – Present*

- Developed a structured C++ library with separate include/ and src/ directories for matrix and linear algebra operations.
- Implemented Gaussian elimination, determinant calculation, and core matrix operations using OOP principles.
- Organised codebase with header files and modular source files, reflecting professional C++ project structure.

GitHub: github.com/Old-Daoist/c-plus

Health-Hive | *JavaScript, React, Node.js, CSS* | *2025*

- Developed a full-stack digital health discussion platform bridging community knowledge with verified medical insight.
- Designed a modular client-server architecture with a React frontend and Node.js backend.

GitHub: github.com/Old-Daoist/Health-Hive

Simple Language Translator | *Python* | *2024*

- Built a corpus-based translation tool without pretrained models, using custom character-swap logic and linguistic rules.
- Demonstrated low-level NLP fundamentals and algorithmic text processing.

GitHub: github.com/Old-Daoist/Simple-Language-translator

Dirt Rally Board Game | *C* | *2023*

- Implemented a turn-based board game engine in C, demonstrating game-state management and procedural programming.

GitHub: github.com/Old-Daoist/Dirt-Rally-Board-game
