KUNAL KAMOD

Software Engineer

Pune, Maharashtra | 7767859953 | kunalkamod03@gmail.com | LinkedIn | GitHub | LeetCode

SUMMARY

Final-year Master's student with hands-on experience in designing, developing, and deploying production-ready web applications. Passionate about building scalable, user-focused solutions while following clean coding practices and industry standards. Strong problem-solving ability with a solid foundation in software engineering principles, API design, authentication, and application architecture. A quick learner who adapts to new challenges, collaborates effectively in team environments, and enjoys exploring emerging technologies. Committed to continuous learning and delivering reliable, maintainable software that solves real-world problems.

TECHNICAL SKILLS

Languages: JavaScript, **C++**
Frontend: React.js, Next.js, Tailwind CSS, Context API, Redux, Responsive Design
Backend: Node.js, Express.js**, REST APIs, JWT** Authentication, Role-Based Access Control (**RBAC**)
Database: MySQL, MongoDB, Database Design
Cloud & DevOps: AWS S3, Vercel, Render, Aiven Cloud, **GitHub Actions**, **CI/CD**
Tools: Git, **GitHub**, **Postman**, VS Code, Figma
Core Concepts: OOP, **Data Structures & Algorithms**, **MVC** Architecture, Authorization, Input Validation, State Management

PROJECTS

FarmEasy | Full-Stack Agricultural E-Commerce Platform

July 2025 – April 2026

FarmEasy is a full-stack, multi-vendor agricultural marketplace that directly connects farmers with consumers and vendors to streamline the farm-to-table supply chain. The platform provides separate customer, vendor, and admin experiences with role-based dashboards, real-time inventory management, and a secure end-to-end checkout flow, along with advanced search, filtering, multilingual support, and GST verification for vendor onboarding. Product and profile media is hosted on **AWS S3**, and the application is deployed through a **GitHub Actions CI/CD** pipeline across Vercel and Render.

- Developed responsive customer, vendor, and admin interfaces using **React.js and Vite.**
- Built scalable **RESTful APIs** using Node.js and Express.js for authentication, products, cart, orders, reviews, and notifications.
- Designed normalized **MySQL** database schemas for users, products, categories, orders, and reviews.
- Implemented **JWT** authentication and Role-Based Access Control (**RBAC**) for customers, vendors, and administrators, and integrated **AWS S3** for secure product and profile image upload, storage, and deletion.
- Automated order confirmation and status update emails using **Nodemailer**, and implemented multilingual support with advanced search, filtering, and GST verification.
- Configured **CI/CD** pipelines using **GitHub** Actions and applied security best practices including protected routes, input validation, and secure token handling, and deployed the frontend on **Vercel** and backend on **Render**.

Kalakriti Art Gallery | Full-Stack Online Art Marketplace

May 2026 – Present

Kalakriti Art Gallery is a production-grade full-stack art marketplace that connects artists, buyers, and administrators to showcase, discover, and sell artwork online. The platform offers dedicated artist and buyer experiences with a shopping cart, wishlist, secure checkout, and order tracking, along with a ratings and review system and an administrative dashboard for platform-wide management. **AWS S3** powers scalable image storage for artwork listings, and development was accelerated using **AI-assisted engineering workflows** with Claude AI and GitHub Copilot. and the application is deployed through a **GitHub Actions CI/CD** pipeline across **Vercel** and **Render**.

- Developed responsive full-stack interfaces using **Next.js**, **Node.js**, Express.js, **MongoDB**, and **AWS S3.**
- Implemented secure authentication and Role-Based Access Control for buyers, artists, and administrators, and built **RESTful APIs** for artworks, users, orders, categories, reviews, and wishlists.
- Integrated **AWS S3** for scalable artwork image upload and cloud storage, and developed shopping cart, wishlist, checkout, and order tracking modules.
- Created an administrative dashboard for managing artworks, artists, users, and platform operations.
- Leveraged **AI-assisted software engineering** workflows using Claude AI and **GitHub** Copilot for rapid prototyping, debugging, and refactoring, while applying secure coding practices including **API validation**, authentication testing, and input sanitization.

EDUCATION

M.Sc. Scientific Computing, Modeling & Simulation — Jun 2025 – Jun 2027
Savitribai Phule Pune University

B.Sc. Computer Science
Savitribai Phule Pune University | **CGPA: 7.46** — Jun 2020 – April 2023

CERTIFICATIONS & ACHIEVEMENTS

Master Node.js: From Beginner to Full Stack Developer — Udemy — Mar 2026
Credential ID: UC-24343bed-6cf6-4e5f-8fed-4d5b2aeb08a8
